

Deploy your Webex-style audio and video conferencing services with VQ Conference Manager's integrated suite of tools

Automated user and meeting Space provisioning and notifications

Define and provision your conferencing users, their virtual meeting Spaces and available call types, based on information from your Active Directory/LDAP system.

Keep up-to-date with moves and changes by scheduling automatic syncing with your centralized corporate user database.

Automatically email new users all the details they need to get started.

Define Space templates for different user needs and scenarios

Successful conferencing services offer the right call experiences for different users in different situations.

Management conferences typically need PIN-secured host and guest roles. An informal internal conference might not need PINs. And in an all-hands conference, the moderators, panel members and participants all need different experiences.

Set up your service exactly the way you want it, with VQ Conference Manager's Space templates.

VQ Conference Manager includes Ansible playbooks to automate key CMS configurations and admin tasks

These include the initial configuration of CMS itself, incorporating certificate management. Further playbooks cover the setup of Cisco Meeting Server web app3 and backing up CMS. And there are more in the roadmap.

The right user experience for users, operators and administrators

Put the right tools in front of the right users. VQ Conference Manager's user interface profiles enable you to configure exactly which functionality is available to which user groups.

High-availability*

As your conferencing service becomes ever-more-important to your organization, it's essential you can rely on the tools you use to manage and operate it.

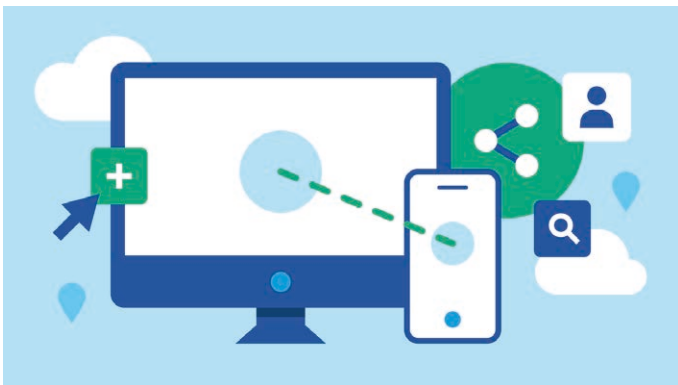

VQ Conference Manager can be set up with multiple nodes, to deliver high-availability. This gives you assurance that even if a node fails, your users, operators and administrators can still access the VQ Conference Manager user interfaces, including the Outlook Add-in, web portal and call-management screens.

Implement enterprise-grade security

VQ Conference Manager is the only management platform for Cisco Meeting Server that supports two-factor authentication (2FA). It integrates with SAML 2.0 systems, delivering enhanced security via Okta, Duo and OneLogin single sign-on (SSO).

In addition, calls can be configured to require access PINs, which can either persist or be time-limited, for added security.
