

**CISCO** *Live!*

Las Vegas | 2-6 June 2024

Visit us on Stand 6230-J  
in the **Collaboration Village**

VQ are at Cisco Live,  
Las Vegas, and this year  
we're going even bigger...

# Meet with VQ at Cisco Live 2024

We're delighted to be heading back to Las Vegas for Cisco Live in June.

Find us on our stand in the Collaboration Village (6230-J) or book some time with us in our Meeting Zone Suites during the event.

## What we will be showing at Cisco Live

Metro is our end-user app that allows users to host, join and schedule their meetings.

Metro provides a consistent user experience and runs on a wide range of devices as a native app or accessed via a browser. Examples include desktop, tablet, smartphone, Cisco collaboration devices, or directly within Microsoft Office and Microsoft Teams.

**Find out how Metro can work for your organisation at Cisco Live 2024.**

Discover more about the Cisco endorsed successor to TMS at Cisco Live.

DMA provides you with a modern way to manage Cisco collaboration devices across your enterprise.

Intelligently designed templating, automation, and address books, mean your administrators and endpoint technicians can configure, maintain, update and troubleshoot large numbers of devices.

VQ Conference Manager's analytics bring together data from your Cisco Meeting Servers, Cisco collaboration devices, VQ Conference Manager, and your wider UC infrastructure.

**Speak to our Engineering team at Cisco Live to find out more about how you can use our analytics to troubleshoot, monitor usage trends, and proactively manage your service's growth.**

Come and meet with us in our Meeting Rooms. They are not intended to be "broadcasts" where we speak and you listen. Nope. We want to be able to show you what we're doing (or think we're going to do), talk about the logic behind what's in the plan and roadmap but, most importantly, listen to you and your view of the functionality you need to enable you to deliver the services you need to deliver to your user base.

These meetings are being hosted by the product managers and engineers at VQ that design, build, test and support our products and define our roadmap.

# VQ Meeting Rooms

Come and meet with us in our Meeting Rooms. We're running the following sessions.

Our meeting rooms have whiteboards and we expect these sessions to a mixture of demos, whiteboarding and interactive discussion (slideware lite). We're planning on them being 45 minutes long, but if you need more or less time we can plan what you need.

<b>Roadmap</b>	Walk thru and discussion on VQ product family roadmap and direction of travel.
<b>Meeting Services</b>	Call Builder, Focus and Compact views and refinements to Reactive Calls. Search is being refined. Blast Dial gets more refinements in 4.5. User interface evolution to the style used by DMA. Initial plans on multi-cluster support. What is the functionality you need to see in Meeting Services?
<b>DMA</b>	We'll be launching 4.4 at CLUS featuring File Server, CUCM importer and quality of life improvements.
<b>TMS migration into DMA</b>	Be taken thru the process and use the opportunity to meet the expert.
<b>Microsoft 365 Connector and Hybrid Calendar</b>	New coolness that will playbook install onto the 4.4 platform. Opens the door to external service meeting invites (Webex and Teams) appearing as OBTP green join buttons on your room systems. Demo gods permitting, we should also be able to show CVI working.
<b>HA Overview</b>	By CLUS, we'll have HA systems in beta. See it running and talk with Tim about the HA design, what it will and won't do. Discuss your requirements and suitability.
<b>HA deployment</b>	Talk with Tim about the detail of deploying HA in fine detail. Typically, this will have been done after having done a HA Overview session.
<b>DMA MTR</b>	DMA controlling RoomOS based devices in MTR mode. One of the key features of DMA is that it significantly reduces the pain of managing more than 1 MTR device; think of the gain when you have hundreds.
<b>Metro (Outlook, Teams, Voice &amp; Service Calls, iOS and Android)</b>	Metro 1.1 has had a lot of love with bug fixes and polish. At CLUS, we'll be showing Metro working in Outlook and the latest Teams integration. And if the Gods are smiling, the Metro Voice concept, Native iOS and an Android flavor (NSA Approved)
<b>Migrations (VQCM 3-&gt;4)</b>	Planning an upgrade; come and talk it thru
<b>Kibana and Analytics</b>	Open session with Ethan, VQ's Kibana lead engineer. Everything you wanted to know but were too shy to ask.

Want to find out more? We'd love to hear from you
