

Apps for hybrid workers to collaborate flexibly and securely

With Metro premium self-service apps

Let your teams access your Cisco conferencing service from just about anywhere, using virtually any device.

Who is Metro for?

Our Metro premium self-service apps are for organizations who need secure and flexible ways to let their employees collaborate using their Cisco systems.

What does Metro enable you to do?

- ✓ Schedule, host, and join meetings via apps for desktop, mobile, web, and Cisco video devices
- ✓ Integrate with Outlook and Microsoft Teams
- ✓ Access our WebRTC client with powerful in-meeting controls
- ✓ Join two meetings simultaneously
- ✓ Offer user interfaces in different languages

METRO PREMIUM SELF-SERVICE

Our Metro premium self-service apps include everything hybrid workers need to conveniently plan, host, and join conferences on your Cisco service.

Flexibly join and manage meetings

Metro provides a range of ways for users to schedule, host, join, and manage their meetings.

Designed for modern hybrid workers who use multiple devices, the software provides a consistent user experience across desktop, tablet, mobile, and Cisco video devices. It also integrates with Outlook and Microsoft Teams, to put Cisco conferencing at the heart of your existing productivity apps.

For organizations not using Outlook for Cisco Meeting Server (CMS) call scheduling, Metro offers its own scheduling and notifications.

Modern meeting client

Provide the in-call functionality your people expect from a modern audio and video client. This includes pre-meeting video and audio previews, participant controls, audio and video management, and background blur.

Localized user interface

International teams can change the Metro user interface language between English, German, French, Spanish, Romanian, Polish, and Arabic. Additional languages can be provided on request.

Dual meeting streams enable in-call interpreters, translators, and more

Users can connect to two meetings simultaneously, with the second video and/or audio stream overlayed on the first.

METRO PREMIUM SELF-SERVICE

Dual call stream uses cases include:

Sign language interpreters	Translators for multi-language meetings	Virtual courtrooms
Enable deaf users to participate in meetings, by overlaying the video from their main call with the stream from one of your sign language interpreters.	Help people follow multi-lingual meetings. Users connect to the main call and your interpreter, who live-translates the foreign language sections. This gives users a seamless single-language experience.	Protect victims and witnesses during virtual hearings, by allowing the judge to speak to them in private, without leaving the main courtroom.

AT A GLANCE

How Metro puts conferencing at users' fingertips

- ✓ **Desktop:** Meeting client and scheduling apps for macOS and Windows
- ✓ **Mobile:** Meeting client and scheduling apps for iOS and Android
- ✓ **Web:** Browser-based meeting client and scheduling app
- ✓ **Cisco video devices:** Scheduling and meeting management app for in-room equipment
- ✓ **Outlook:** Schedule and manage meetings and meeting spaces (virtual meeting rooms), and launch the Metro meeting client
- ✓ **Microsoft Teams:** Manage Cisco meeting spaces, schedule CMS meetings, and add one-click joining instructions to Teams chats and channels
